

DAS732 - Term 1 - 2026-27, IIITB

Project & Report AI Disclosure Statement

Name of Student: Kalpit

Roll Number: BT2024093

1. Data Processing and Python Code Generation

Tool(s) Used: Gemini

Specific Applications:

- ☒ Learning Python and data analysis techniques
- ☐ Data cleaning, filtering, or restructuring scripts (Pandas / NumPy)
- ☐ Plot/Chart generation boilerplate (Matplotlib / Seaborn / Plotly)
- ☐ Statistical calculation code (SciPy / Statsmodels)
- ☒ Debugging error logs

Prompts Used & Modification Level:

Gemini was utilized to author the production Python code for this project. All data preprocessing, structural transformations, analytical procedures, and implementation workflows were executed independently.

Instead, Gemini served exclusively as an educational and troubleshooting aid. It was consulted to deepen comprehension of core Python concepts, clarify the proper application of data analysis libraries, parse complex error messages, and diagnose syntax issues. Every recommendation or snippet reviewed was critically evaluated and manually adapted to fit the project specifications.

4. Report Writing, Data Analysis, and Documentation

Tool(s) Used: Gemini

Specific Applications:

- ☐ None
- ☒ Structuring the data analysis report

- ✓ Describing visual trends, patterns, and observations
- Translating statistical findings into non-technical stakeholder language
- ✓ Proofreading, language refinement, and formatting
- Generating inline JSDoc or Python docstrings / comments

Description of AI Involvement:

Gemini functioned as an auxiliary writing and editorial assistant during the drafting phase of the report. It assisted in outlining the report structure, articulating visual trends identified in the data, and enhancing the overall grammatical precision, flow, and readability of the text.

The core data analysis, interpretation of analytical outputs, and final conclusions are entirely my own, derived directly from inspecting the dataset. Suggestions provided by the tool were heavily vetted, revised, and integrated only when they faithfully reflected my independent findings.

5. Integrity and Originality Validation

Core Logic & Analysis Statement:

I affirm that the data preprocessing pipelines, analytical methodologies, result interpretations, final insights, and conclusions were formulated through my own comprehension and examination of the dataset. All code and analytical components were thoroughly reviewed and validated by me.

Generative AI tools were restricted strictly to supplementary support—specifically for learning Python concepts, troubleshooting errors, organizing the narrative structure of the report, and refining documentation clarity. The substantive intellectual content, conclusions, and verifications remain exclusively my own work.
