

DAS732 - Term 1 - 2026-27, IIITB

Project & Report AI Disclosure Statement

Name of Student: LAKSHYA JAIN

Roll Number: BT2024044

1. Data Processing and Python Code Generation

Tool(s) Used: ChatGPT

Specific Applications:

- ☒ Learning Python and data analysis techniques
- ☐ Data cleaning, filtering, or restructuring scripts (Pandas / NumPy)
- ☐ Plot/Chart generation boilerplate (Matplotlib / Seaborn / Plotly)
- ☐ Statistical calculation code (SciPy / Statsmodels)
- ☒ Debugging error logs

Prompts Used & Modification Level:

ChatGPT was not used to generate the Python code used in the final project. The data preprocessing, transformation, analysis, and implementation decisions were carried out by me.

ChatGPT was primarily used as a learning and debugging aid. I used it to understand Python concepts, clarify the use of different data analysis libraries, interpret error messages, and identify possible issues in my code. The suggestions provided were reviewed and understood by me before I implemented or adapted any changes in my work.

4. Report Writing, Data Analysis, and Documentation

Tool(s) Used: ChatGPT

Specific Applications:

- ☐ None
- ☒ Structuring the data analysis report
- ☒ Describing visual trends, patterns, and observations

- ☐ Translating statistical findings into non-technical stakeholder language
- ✓ Proofreading, language refinement, and formatting
- ☐ Generating inline JSDoc or Python docstrings / comments

Description of AI Involvement:

ChatGPT was used as a supplementary writing and communication aid while preparing the report. It helped with organizing the structure of the report, describing patterns and trends observed during the analysis, and improving grammar, readability, and clarity of the written content.

The data analysis, interpretation of results, and conclusions were based on my own examination of the dataset and the outputs generated through my analysis. Any suggestions provided by ChatGPT were reviewed, modified, and incorporated only when they accurately represented my own analysis and observations.

5. Integrity and Originality Validation

Core Logic & Analysis Statement:

I confirm that the data preprocessing, analytical methodology, interpretation of results, conclusions, and final insights were developed based on my own understanding and examination of the dataset. All Python code and analytical work used in the project were reviewed and validated by me.

AI tools were used only as supplementary assistance for learning Python, debugging, organizing the written report, describing observations, and improving the clarity and presentation of the documentation. The final analysis, interpretations, and conclusions were independently reviewed and verified by me.
